

## SVB GREEN

Sun Valley Bronze has the future in mind both for our business and community. By manufacturing our hardware entirely in Idaho, Sun Valley Bronze provides local jobs, reduces transportation costs, and supports a strong Idaho economy. We strive to make our facilities environmentally responsible by using green sand technology in the casting process, participating in both metal scrap and office material recycling programs, and ensuring healthy working conditions for our employees. While maintaining the traditions of creating handmade products of uncompromised quality, Sun Valley Bronze strives to conduct a business with integrity.

Sun Valley Bronze has been awarded certification from Scientific Certification Systems (SCS) for recycled content of our architectural hardware. SCS is a leading third-party provider of certification, auditing and testing services, and standards, founded in 1984. Sun Valley Bronze architectural hardware can be used to earn the following points for your LEED project:

White Bronze: A Minimum 95% Pre-Consumer Recycled Bronze Content These products can be used to earn LEED MR Credits 4.1 and 4.2.

Silicon Bronze: A Minimum 90% Pre-Consumer Recycled Bronze Content These products can be used to earn LEED MR Credits 4.1 and 4.2.

Not only aesthetically beautiful, bronze has the additional benefit of natural anti-microbial and self-decontaminating properties. Research has shown that copper and its alloys inhibit the growth of harmful bacteria. The development of copper alloy door handles, push plates and fixtures are now recommended by the Copper Development Association (CDA) for health care facilities and other institutions.
